Films on Demand (POD) is a database of educational videos and films covering all disciplines. You can embed entire films or selected segments into your Canvas modules or pages. Once the film is embedded into your Canvas modules, students will be able to view the video without having to go through the library's authentication process.

There are 2 ways to insert FOD content:
- Within your modules as an embedded link.
- Right in a content page as an embedded video.

When putting together a content page:
- In the rich content Editor look for the blue "V" icon.
- Select "Films On Demand" option.
- Then follow steps 4 & 5 from above.
